

MANUFACTURER: BABB CO**DESCRIPTION / APPLICATIONS :**

Flocculent for waters polluted by organic products, including penetrant testing products. Helps to reduce the consumption of activated carbon significantly.

This product can be used to stabilize pollutants and generally allows for discharge to class I landfills (household waste).

There is no salting-out subsequent to washing.

Companion product(s): all penetrants used in penetrant testing

DIRECTIONS FOR USE

It is recommended to know more or less the penetrant content in the water to be treated (ask us for analyses). The usual dose is 2 kg of FSP 3 for 1 liter of penetrant. You should add the powder gradually, stirring the content of the tank. Once you finish adding the powder, stir for 10 minutes. Then, leave at least another 5 minutes of contact.

Flocks have formed and fall to the bottom of the tank. Water can generally be discharged. If water requires recycling, you should complete the treatment with activated carbon.

Ask us for:

- Pre-discharge analyses
- Recycled water quality requirements
- Flock filtration
- What should be done with the dehydrated flocks
- Activated carbon filters.

TECHNICAL CHARACTERISTICS

Activated mineral product. Chemically neutral.

PRECAUTIONS FOR USE AND STORAGE

Shipping / Handling : refer to MSDS.

Storage : Keep away from moisture.
