## WATER BASED LEAK DETECTION MEDIUM DFA 200A

**MANUFACTURER : Babb Co (FR)**

**DESCRIPTION / APPLICATION(S) :**

DFA-200A is used in particular to detect leakage on transformer tanks, closed circuits,  
... It diffuses intense yellow-green light under UV-A lighting (365 nm).

**Companion products :** /

**SPECIFICATION(S) / STANDARD(S) :**

- None

**PHYSICO-CHEMICAL PROPERTIES:**

- Aspect : yellow-green liquid
- Brightness : yellow-green
- Odour : low, typical
- Contains an anti-foaming agent

**PACKAGING / TRANSPORT / STORAGE :**

**.Packaging :** 1L, 5L, 10L, 25L, 60L can  
200L drum

**.Transport / Handling :** Refer to Material Safety Data Sheet (MSDS).

**.Storage / Shelf life :** Keep away from moisture  
Temperature range : +10°C à +40° C (50°F to 104°F).  
Keep packaging closed after taking out some of the  
product

Can / drum : 48 months

## **INSTRUCTIONS :**

### **Search for crossing defects.**

DFA 200A can be applied on areas to be controlled (weldings in particular) by spraying, by brushing or by filling the tank with product.

Opposite side of application has to be observed with a UV-A lamp, in a dark environment, in order to highlight the appearance of fluorescent indications, which are the signals of a leak. The more important is the leak, the more rapidly the indications appear and spread.

Generally, if no indication has appeared by 30 minutes, it is admitted that there is no leak.

## **HEALTH AND SAFETY :** Refer to Material Safety Data Sheet (MSDS).
